

SSE - Attack Phase

By, CS20B073 & CS20B009

Binary ID : 89

So we first went through the main function and found an if-else ladder which calls a set of functions. Of all these functions only one function called 'Kenny' does some useful computation. We binary edited the file at the place where it takes the password for the sum function and we binary patched the file to call the Kenny function. Now we call the Kenny function using the key of the sum function.
